

Edward A, Matsubayashi T, Fapohunda B, Becker S. (2009). *A Comparative Analysis of Select Health Facility Survey Methods Applied in Low and Middle Income Countries* (wp-09-111-en). North Carolina: MEASURE Evaluation.

**<Abstract>**

MEASURE Evaluation's 2006 Profiles of Health Facility Assessment Methods [TR-06-36] provides a succinct overview of commonly applied health facility assessment methods in developing countries. This working paper further examines the sampling methods and provides a comparison of the various approaches in an attempt to identify the distinctive features of each method.
